

Adrena Navigation and Routing Software. Sail faster !

Saturday, 02 Jan, 2016

[Examiner Union](#)

Adrena is a quite unknown navigation software (at least for non racing yachtsmen and yachtswomen), but an excellent alternative to Maxsea, developed initially for professional skippers, that has become a reference in the offshore sailing racing circuit. But now that satellite internet connexions became affordable for cruisers, it has also become an nearly indispensable software for those who want to get access to a simple and efficient routing, wherever they are, to increase their pleasure and safety while sailing offshore.

The software was initially designed for offshore racing, with Michel Desjoyaux a.k.a “the professor”, 2 times victor of the “Vendée Globe”, being among the first users. It’s now the most used navigation and routing software for inshore and offshore sailing races throughout the world, and benefits from the feedbacks of all those users to keep getting better.

But if you’re not a professional racer, you should really keep reading anyway, as Adrena is a fantastic software for cruisers too.
