

RETURN FROM THE SUMMER HOLIDAYS AT ADRENA DISCOVER THE NEW FEATURES!

AdrenaFree revival

Always at the cutting edge of innovation and seeking to provide to all of its users the best of its know-how, Adrena has perfected and improved its products. On the return of the summer holidays, the free version of its navigation software integrates new features inspired by its best-seller.

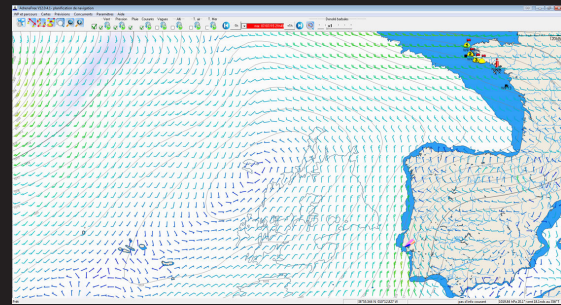

Discover the main innovations of AdrenaFree Version 12.

New toolbar

Thanks to a new Toolbar, it is now possible to download GRIB files for free directly from the software. Indeed, no need to go to the website of a supplier anymore. Now, Adrena integrates a direct and simplified interface in order to access to scientific data from the NOAA American agency (National Oceanic and Atmospheric Administration).

Based on the GFS American model, it is now possible to download GRIBS forecasts and to include data about rain, wind, air temperature as well as North Atlantic currents GRIBS. Three different meshes are available: 0.25, 0.5 and 1° and the duration of these new fine GRIBS is extended to 16 days.

Free worldwide forecasts at hand!

Touchpad

The new version also offers the possibility to use AdrenaFree on a touchpad. Icons of the toolbars are

also evolving to become bigger. It is possible to zoom in and out by spreading two fingers on the screen

or moving them closer. The aspect of the menu is changing in order to facilitate the touch-sensitive use.

Improvement of the interface

Updated with new functions and new icons, the use of the interface is now much easier.
