

# ADRENA

to serve your performance.

what's new for 2009

Once again this year, Adrena is going further in its developments to serve its clients' performance. The version 6 of Tactique and Optima software sharpen their ergonomia and integrate many new functions.

## New ergonomia :

Most of all the functions linked to the cartography and to waypoints and routes work are available directly on the chart by drag&drop. So it becomes easier to

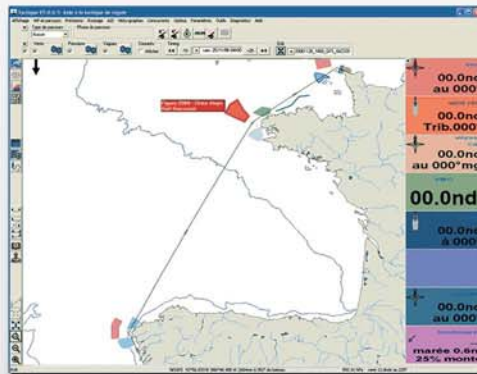

- > move and rename a waypoint
- > changer the side to let of a mark
- > create a route
- > add, remove or move a mark in a route
- > ...

## New functions :

New functions in the routing module :

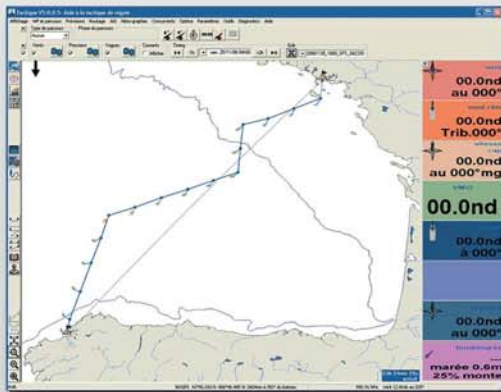

- > multi GRIB display and integration in calculation of a routing
- > display of the wind conditions that will be found along the routing (post-it and barbules)
- > Display of the precipitations and of the altitude wind predictions

Routing :  
wind barbules along the routing

## RoadBook

> When preparing his navigation, the navigator can write notes, set special areas on the chart, on the Sailect or on a track : it's building bunch of informations to watch during the race.

RoadBook

## MyBible

> True navigator's notebook, MyBible is collecting all his sailing personal notes.

## Collect

> It is an afterwards study of the navigation.

- > You can write notes and qualify segments on the tracks during and after sailing (debriefing)
- > You can color the track within some different criteria (wind, performance, leg...) to help in their analysis.
- > You can extract and merge the tracks to realise Collects which will enable the analyse of the situations.

## TrimBook

> It is a notebook of the boat's trim. From the work realised with the Collect, the Sailect, the data of Optima, the navigator is building an exhaustive notebook of the best trims of his boat : sails, appendages, tension...
