	Description	ADRENA FIRST	ADRENA STANDARD	ADRENA PRO	OPTIMA PRO
	Multi-monitor software				
	Touch screen mode				
	Backup/recovery of settings, files and cartography				
	Calibration of instruments (log, compass and windvane) Waypoints & routes management				
	Global tide module				
	Charts compatibility: electronic vector charts (CMap MAX) and raster charts (SnMap, BSB)				
	GRIB weather files viewer				
	GRIB files download online and by email up to 16 days				
	NOAA, Great Circle, Predictwind, Navimail, Saildoc and Tidetech direct interface				
io	Tide charts compatibility: SHOM, Proudman (+ high resolution), Winning Tides (Solent) Logbook (position, wind, speed and observations)				
gat	Meteograms				
Navigation	Overlay of georeferenced images				
ž	Export of data to Google Earth				
	AIS anti-collision system				
	MOB: alarm + man over board tracking with drift calculation				
	Alarms setup: MOB, AIS, Sart AIS, coast detection and anchor alarm Custom alarms: depth, wind force and direction, wp, etc.				
	Roadbook with possibility to add visual annotations on the chart				
	AIS tracking				
	Datagrams: data evolution along the route (currents, sailect,)				
	Integration of external current atlas				
	Loading of historical GRIBS and ensemble forecasts				
	NOAA GRIB automatic loading				
	Competitors monitoring Calculation of recovered time IRC/HN				
	Calculation of recovered time IRC/HN Management of the start, windward/leeward and coastal route				
	Laylines calculation and display				
Regatta	Integration of the current in laylines and time to the marks				
	Possibility to send calculated data to iPhone or iPad				
	Safe Starting Area				
	Possibility to add more info about the track of a competitor with AIS transmission Inertia and manœuvres taken into account on the sarting area				
	Data averaging				
	Management of a leeward gate				
	Use of specific polars: start, navigation, performance				
	Polars adjustment in real time				
	10 Hz instruments interface				
	Calculation of optimum route while automatically avoiding coastlines				
	Routing in 2 clicks				
	Routing in 2 clicks Dual Routing: sailing and motoring				
	Routing in 2 clicks				
	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations				
	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors				
	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table				
	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing				
ting	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table				
outing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind, conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several GRIB files to calculate routing				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves height limit in routing Simulation of several routings Use of several GRIB files to calculate routing Routing hypothesis: scanning of variables				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind, conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several GRIB files to calculate routing				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routing: wind, sails				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves height limit in routing Simulation of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routing: Video creation on routings Multiple routings on historical GRIBS, ensemble forecasting				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves height limit in routing Simulation of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routing: Video creation on routings Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routings Wideo creation on routings Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routings Wideo creation on routings Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars calucation from navigation data				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves height limit in routing Simulation of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routings Micro-routing on laylines: "best side of the navigation square" Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars calucation from navigation data				
Routing	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routings Wideo creation on routings Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars calucation from navigation data				
	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routings Micro-routing on laylines: "best side of the navigation square" Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars caluclation from navigation data VPP polar diagrams creation Creation and modification of Sailect (optimum ranges of True Wind Speed and Angle for individual sails)				
	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routing: Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars calucation from navigation data VPP polar diagrams creation Creation and modification of Sailect (optimum ranges of True Wind Speed and Angle for individual sails) Performance analysis (VMG, target boat speed) Possibility to load tracks and correct them Graph of data history: histograph				
	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several couldings Use of several could for a calculate routing Routing on laylines: "best side of the navigation square" Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars calucation from navigation data VPP polar diagrams creation Creation and modification of saliet (optimum ranges of True Wind Speed and Angle for individual salis) Performance analysis (VMG, target boat speed) Possibility to load tracks and correct them Graph of data history: histograph Replay of recorded tracks				
Analysis	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing of competitors Routing (s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several routings Use of several routings Risk/delay assessment: inverse isochrones and isoroutes Statistics on routing: wind, sails Video creation on routings Micro-routing on laylines: "best side of the navigation square" Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars caluclation from navigation data VPP polar diagrams creation Creation and modification of Sailet (optimum ranges of True Wind Speed and Angle for individual sails) Pereformance analysis (VMG, target boat speed)				
Analysis	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several couldings Use of several could for a calculate routing Routing on laylines: "best side of the navigation square" Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars calucation from navigation data VPP polar diagrams creation Creation and modification of saliet (optimum ranges of True Wind Speed and Angle for individual salis) Performance analysis (VMG, target boat speed) Possibility to load tracks and correct them Graph of data history: histograph Replay of recorded tracks				
Analysis	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing (s) summary table Possibility to set up wind speed and angle limits in routing Display of wind conditions encountered along the route Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several GRIB files to calculate routing Risk/delay assessment: inverse isochrones and isoroutes Statistics on routing: wind, sails Video creation on routings Mitror-routing on laylines: "best side of the navigation square" Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars caluclation from navigation data VPP polar diagrams creation Creation and modification of Sailect (optimum ranges of True Wind Speed and Angle for individual sails) Performance analysis (VMG, target boat speed) Possibility to load tracks and correct them <				
Analysis	Routing in 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing(s) summary table Possibility to set up wind speed and angle limits in routing Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves heigth limit in routing Simulation of several routings Use of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routing: Micro-routing on laylines: "best side of the navigation square" Multiple routings on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars caluclation from navigation data VPP polar diagrams creation Creation and modification of Sailect (optimum ranges of True Wind Speed and Angle for individual sails) Performance analysis (VMG, target boat speed) Possibility to load tracks and correct them Graph of data history: histograph Replay of recorde				
Analysis	Routing: n 2 clicks Dual Routing: sailing and motoring Integration of the current in routing calculations Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing calculation on a coastal route Compulsory waypoint (pivot on isochrone) Routing of competitors Routing of competitors Routing of competitors Routing you way table Possibility to set up wind speed and angle limits in routing Display of wind, current, tide and waves conditions encountered along the route Possibility to set up waves height limit in routing Simulation of several routings Use of several GRIB files to calculate routing Routing hypothesis: scanning of variables Risk/delay assessment: inverse isochrones and isoroutes Statistics on routing: wind, saits Video creation on routings Micro-routing on historical GRIBS, ensemble forecasting Loss due to sail change taken into account in routing calculation Display of wind variability Real polars calculation from navigation data VPP polar diagrams creation Creation and modification of sailect (optimum ranges of True Wind Speed and Angle for individual sails) Performance anal
