

NKE main computers

Adrena upload performance data to NKE directly NMEA connected following display:

- Gyrographic connected with a processor regatta
- Multi performance display
- Multigraphic
- TL25 mast unit

The additional information sent to NKE main computers concerns:

- **The target speed** for the current wind: Target_Speed channel on the main computer
- **The percentage speed of the boat / polar speed** for the angle and the wind strength measured: Polar_Speed_% channel on the main computer,
- **The VMG percentage of the boat / polar VMG** for the wind strength measured: Target_VMG_% channel on the main computer. It is the upwind VMG when you are beating and the downwind VMG when you are running,
- **The angle of the true wind for the best VMG** (beating or running): Optimum_TWA channel on the main computer,
